Aircraft Assembly Plant No. 116 was covered by [REDACTED] photography. It is located in the southwest section of the town of Semenovka, USSR, which lies 100 miles northwest of Vladivostok and 40 miles southeast of Spassk-Dal'niy. The plant is reportedly an important producer of training and liaison aircraft. 2/ 3/

The area occupied by the plant is 2,700 feet long and 2,320 feet wide, and the main fabrication building is 735 feet long and 335 feet wide. The airfield is covered with snow in the photography, but appears to be approximately 5,000 feet in length. The nature of the airfield surface cannot be determined.

An unusual unidentified structure exists in the eastern corner of the plant area. The structure, probably of concrete, is shaped like the frustrum of a cone, and is approximately 85 feet in diameter and 30 feet high, with a ramp apparently leading to an area beneath. This structure did not appear on [REDACTED] photographic coverage of this facility and, aside from a few warehouses, represents the only new construction since that time.

A rail line from Manzovka, 52 miles west of Semenovka, connects the plant with the Trans-Siberian Railroad.

Power is supplied by a large thermal electric power plant located 1,500 feet WNW of the plant.

The major components of the plant are identified in the following key to annotations and on the accompanying photograph.
